Daniel Kowalski

Front-end developer

About me

Hi! I'm a 20-year-old front-end developer who started web development during a 2022 internship at Kyndryl. I worked on a cybersecurity project with friends in my final school year, and I'm now beginning studies at Silesian University of Technology.

Experience

Kyndryl - Internship

11.2022 (1 month)

The internship was my first corporate experience, where I learned about SCRUM, Agile, and how large companies operate. We continued lectures on mainframes from school and had the chance to meet and learn from various specialists, broadening my perspective on the industry.

Kyndryl - Logistics and IT support assistant

02.2023 - 08.2023 (1 month)

After my apprenticeship, I applied for a position at Kyndryl to assist with IT and office tasks and was accepted once the department opened. My role involved helping coworkers with computer issues, offering varied and flexible work that required strong problem-solving and logical thinking skills.

Lunarisweb.pl - Freelance

03.2023 - present

I've worked with technologies like Next.js, Sanity CMS, WordPress, and used tools like Inkscape and GIMP for logo design and ads. I created websites and ads for companies from many fields

Projects

Bezpieczni w teorii

11.2023 - 05.2024

I handled the entire graphic design and marketing for the project, creating the logo, building the website in React.js. The project, focused on cybersecurity, included lectures from specialists at ING Bank Śląski, Kyndryl, Revolut, and more. It qualified for the finals of the olympiad.

Lunaris UI - ui.lunarisweb.pl

08.2024 - present

When I create websites for my clients in my freelance career, I save time by using prebuilt components that I developed earlier. I realized I could make these open-source to help others on their journey.

Certificates

- Project Management Principles - Project Management Institute
- Information Technology Technician vocational diploma - Examination Board in Jaworzno
- React Front to Back - Brad Traversy
